

**In The Specification**

To collocate the drawings amendments, applicants have amended the specification, such as “a primary side and a secondary side of the transformer 11” to “a primary winding  $N_p$  and a secondary winding  $N_s$  of the transformer 11”. This is only to make the description more clear, not to add new matters. Another example of amendment, such as “The current-sense mechanism 21 is further coupled to the synchronized rectifying controller 30”, is fully supported by the originally drawing **FIG. 4**. All the amendments fall within the original disclosed content of the present invention.
